

Coca-Cola HBC Magyarország Kft.

Water Efficiency Policy

At Coca-Cola HBC, we are dedicated to reduce our water consumption related to our activities in spirit of sustainable development.

Our aim is to offer safe, quality products and services to our partners and customers, in which we are committed to create coherence between reaching our business goals, protecting the environment and using water efficiently. We wish to achieve this goal through the use of a management system that focuses on our water efficiency, as well as via the implementation of principles ensuring the ongoing development of said system, which applied to the area of production facilities in Dunaharaszti and Zalaszentgrót.

Our commitment is based on the following principles:

- We aim to continuously increase water efficiency while maintaining our services' quality and our employees' comfort.
- We strive to explore and cease every water wasting point by regularly reviewing our processes.
- We strive to observe and apply current legislations related to water consumption and efficiency, and we apply the internal Group standards.
- We execute and certify ISO 46001 energy management system in favor of continuously increasing energy performance.
- Commitment towards increasing water efficiency is a task and responsibility for every leader and employee of the company.
- Minimize the impact from operations, by decreasing water use and ensuring that wastewater is fully treated to levels that sustain aquatic life
- We familiarize our employees about the company's water efficiency policy, the aims of the water management system and the methods and results of their implementation. We provide the required training and information for maintaining energy awareness to every employee, which they can use not only at their workplace, but even in their homes and wider environment.
- We determine our targets during the operation of the water management system. We reconsider our targets every year and we define the new targets and forthcoming trends based on the results of assessment.
- The leadership of the company provides every information and source to be accessible for the purpose of reaching every water efficiency target and forthcoming trend.
- We prefer products and services which are contributing to reach our water efficiency goals and to maintain the company's water use performance.
- We present our results achieved in the annual Sustainability Report.

As the general manager of the company, I am personally committed to implement and maintain the Water Efficiency Policy of Coca-Cola HBC Hungary.

Ágnes Kovács
General Manager
